| <b>Project Name</b>  | Rising Waters |
| <b>Maximum Marks</b> | 4 Marks       |

### Empathy Map

Empathy Map is a collaborative tool that visualizes a target persona's behaviors, motivations, and core perspectives—What they Say, Think, Do, and Feel. For RISING WATERS, it grounds the machine learning predictive models in the high-stakes anxieties of flood-prone communities.

|                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>SAYS</b></p> <ol style="list-style-type: none"> <li>Existing alert frameworks inform us when it is already too late to take action."</li> <li>"Accurate flood prediction metrics are simply not easily accessible to the public."</li> <li>"We urgently need a simple web dashboard to check localized, real-time risk classifications."</li> </ol> | <p><b>THINKS</b></p> <ol style="list-style-type: none"> <li>How can I protect my family and property from devastating seasonal flood damage?</li> <li>Why can't regional authorities deploy a real-time, intelligent forecasting platform?</li> <li>Can high-accuracy machine learning models give us early warning advisories hours?</li> </ol>                       |
| <p><b>PERSONA NAME</b><br/>(Role / User Type)</p>                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                        |
| <p><b>DOES</b></p> <ol style="list-style-type: none"> <li>Constantly monitors local weather conditions and manual rainfall observations.</li> <li>Scrambles frantically at the last minute to move valuable assets and plan chaotic emergency evacuations. Actively seeks out scalable, public cloud-deployed environmental tools.</li> </ol>             | <p><b>FEELS</b></p> <ol style="list-style-type: none"> <li><b>Anxious and stressed</b> every time a heavy downpour or intense monsoon season begins in our flood-prone district.</li> <li><b>Unprepared and vulnerable</b> because conventional forecasting methods fail to predict disasters at the right time, leaving no room for a structured response.</li> </ol> |
